Things just aren't adding up re Covid...this mild disease...

It's not nearly as deadly as made out...

And what about the children? Children aren't at risk of Covid - why are they being set up to have Covid jabs, who knows how often?

Things just aren't adding up re Covid...this mild disease...

See below my email to South Australian premier Peter Malinauskas, putting some info 'on the record'.

Subject: Deaths re Covid and Covid jabs, including Covid jabs for kids

To: <premier@sa.gov.au>

Cc: <ministerforhealth@sa>, <nicola.spurrier@flinders>, <SAPOL.Covid19Command@police>, <sapol.enquiries@police.sa>, <senator.rennick@aph>, <senator.antic@aph>, <senator.roberts@aph>, <emma.mcarthur@pandata>

For the attention of:

Peter Malinauskas

Leader of the SA Labor Party

Premier of South Australia

Peter Malinauskas, re an article in *The Advertiser* today: **Covid hospitalisations rise by 14 in SA, as evidence shows vaccination cuts death date.** (See copy attached.)

In the article, Nicola Spurrier admits "**most people had a fairly mild reaction to Covid**".

She says 281 had died - that's over more than two years. To put that in context, 13,607 deaths were registered in South Australia in 2020, with 13,917 deaths registered in 2019.[1]

What are the ages and comorbidities of the 281 people who died?

In regards to the generalised vaccination and dose statistics Nicola Spurrier provides, as usual she's a reference free zone - can we have some detailed information, including relevant to age and health status?

Also, what is the impact upon people of having jabs every few months? For instance, *Bloomberg* reports: "**European Union regulators warned that frequent Covid-19 booster shots could adversely affect the immune response and may not be feasible. Repeat booster doses every four months could eventually weaken the immune response and tire out people, according to the European Medicines Agency.**"[2] It seems like the jabbed people are well on the way to weakening their immune response, and soon they'll be pressed to have flu jabs too...the vaccine load is forever increasing...

The Advertiser article also refers to "**Covid jabs for kids**".

Why is there so much pressure for children to have the Covid jabs? They're not at serious risk of disease.

"**Most children with SARS-CoV-2 infection are asymptomatic or experience a mild illness. Those who are symptomatic typically have a short illness with a median duration of 5 days (interquartile range [IQR] 2–9 days)**" - this is admitted by the Australian Technical Advisory Group on Immunisation (ATAGI).[3] ATAGI acknowledges that children aged 5-11 years "**were the least likely of all age groups to require hospitalisation or ICU admission for COVID-19**". ATAGI also acknowledges that "**Deaths in children due to COVID-19 are rare**".

Why does ATAGI recommend the Covid jabs for children, when "Most children with SARS-CoV-2 infection are asymptomatic or experience a mild illness", are least likely to be admitted to hospital for Covid, and deaths in children due to Covid are rare?

This doesn't make sense. Obviously children are able to deal with SARS-CoV-2 naturally themselves. **Why is children's natural immune response being put at risk with the Covid-19 'leaky vaccines' that don't prevent infection nor transmission? Is anyone asking this question?**

What's going to happen to children going forward? They've been set up for these jabs against a disease which isn't a threat for them, and will be getting repeat jabs in future? What are these defective 'leaky vaccines' going to do to their natural immune response?

Again, this isn't making sense... Why isn't this being questioned officially?

If something goes wrong with these jabs in future, it's going to get very tricky... This is why the vaccine manufacturers wanted protection from liability... For instance in 2020, Ruud Dobber of AstraZeneca said "**This is a unique situation where we as a company simply cannot take the risk if in...four years the vaccine is showing side effects**".^[4] And it's the same for the other jabs - something could show up a few years down the track, and they want liability protection. But if it's realised they've deliberately spread 'leaky vaccines' around the world, generating lucrative repeat markets, this puts a whole different slant on things... It's certainly highly questionable to be jabbing children now with these experimental 'leaky vaccines' that don't prevent infection nor transmission, and which might also disrupt children's own effective natural immune response.

Please also see my *BMJ* rapid responses:

- **Is it ethical to vaccinate children to protect the elderly?** 5 August 2020
- **Is it ethical to impede access to natural immunity? The case of SARS-CoV2** 25 March 2020

There's huge problems with this mass population Covid-19 jab rollout Peter Malinauskas, you really need to think about your position on this matter, including of course re the Covid jab mandates, which have destroyed 'valid voluntary consent'.

Sincerely

Elizabeth Hart
